The New Perennials Glossary

Students in the fall 2018 and fall 2019 *Perennial Turn in Ag and Culture* course were assigned a mid-term paper in which they were asked to develop two glossary terms that describe the perennial turn. They each had to provide a rationale, background, and context that explained their choice in a 10-page paper that also connected the thinking and learning they had been doing all semester. In the summer of 2020 New Perennials interns Raechel Zeller and Kendal Pittman compiled the terms and developed a format for the glossary. Our fall 2020 Intern James Peacock designed these beautiful images on display here.

There are new meanings for old words, and new words with perhaps old meanings. The presentation format below was inspired by Perennial Turn student Maya Gomez who designed a recipe card for one of her glossary words, *Indestructible Wonder*.

Enjoy this burst of imagining what it is to be perennial!

Indestructible Wonder

Indestructible Wonder

® Visit this recipe every day, or as needed, for a lifetime of Wonder. Breathe, smell, and be with your Wonder.

INGREDIENTS

Safety 1. Respect for Nature Living Thinking 2. Welcome Dialogue Curiosity 3. Bravery & Desire Beginners Mind 4. Sauntering Close Observation Receptivity & Acceptance Escape Routine Appreciation

*Creativity (Optional)

DIRECTIONS

- Add each ingredient to a large mixing bowl one at a time, giving thought as each ingredient is added. Mix well.
- Heat the mixture on medium, allowing it to melt and stirring occasionally to incorporate every idea.
- Reduce the heat to low and allow the mixture to simmer on the front burner. Smell the Wonder flowing through the air.
- Beginners Mind

 4. Bring awareness to your Wonder each day when you wake up. Make an intention to continue to Wonder during the day. The smell acts as a continuous reminder to be receptively & Acceptance Escape Routine

 Escape Routine

 Wonder Rowing through the air Make an intention to continue to Wonder during the day. The smell acts as a continuous reminder to be receptive, walk slower, and to question the world. Enjoy your Indestructible Wonder.
 - Indestructibility | Tend to your wonder as needed, modifying ingredients as you and your Wonder transform. The continual simmer and attention supports a sustainable and Indestructible Wonder.

Animacy

The inherent spirit and agency found in all beings and parts of nature. Viewing the world around one as animate rather than inanimate can lead to deeper respect and stewardship for the other-than-human world.

Term developed by Shio Tsurudome, Fall 2018 The Perennial Turn in Ag and Culture student Middlebury College

Anthrotexderdness

A n area and its naturally developed life community. Used as an alternative to wilderness, but includes humans in the life community rather than separated. Consists of anthro-, meaning human, tex-, meaning woven, and der-, meaning animal. From this etymology, it is clear that anthrotexderdness is a space in which all beings, human and non-human, are woven together and interdependent.

Term developed by Malia Armstrong, Fall 2019 The Perennial Turn in Ag and Culture student Middlebury College

Autocatalysis Autocatalytic

omponents of a system enjoy a symbiotic relationship in which the growth of one element aids the growth of the entire system, creating a cycle of mutual and reciprocal growth. Recognition of autocatalytic cycles removes the ability to separate parts from a whole, and necessitates consideration of a whole system because the components of an autocatalytic cycle "belong together." Recognition of autocatalytic cycles can also encourage the nourishment and stewardship of other parts of the system we find ourselves part of beyond ourselves, because of the knowledge that the growth of those parts will benefit our own growth.

Indigenous (n.)

Those with a deep understanding of a local area. Becoming indigenous to a land involves adapting and integrating into the systems of that place, and allows for easier adaptation in the future. Space and methods for all of living indigenously on a land need to be created to allow for a respect and greater stewardship of the land. Indigenous peoples in America have historically been oppressed and denied the right to live indigenously on their land; their rights to the land must be acknowledged and incorporated in a return to indigeneity.

Crisymed

Term developed by Emily Thompson, Fall 2019 The Perennial Turn in Ag and Culture student Middlebury College

Life

I nvolved in ecological relationships, or alternatively, the Earth and all of its parts. Life for a "non-living thing" can be defined by the relationship it has to other things traditionally considered "life." For example: water is life because it gives life to us, "building blocks such as this should be characterized as life because they are fundamental to life as a whole." This broader definition of life is essential to the Perennial Turn so that the respect and authority assigned by humans to life is more universally paid.

Saunter

A reclamation of the human experience and human coexistence with the world: sauntering is a time to see and to be and to reflect. As opposed to walking through our surroundings, to saunter is a spiritual act and elicits feelings of connection to what makes up our world. Sauntering introduces an option for a fundamental shift in the way we exist, and the respect and connection it can bring can lead to a greater sense of responsibility and stewardship for the land.

Shift away from object thinking

A shift away from the view of the world as distinct objects, even at the most basic level (the atom), and towards a more inclusive and interconnected view. To accomplish the goals of the Perennial Turn, we must accept that the world is too complex for reductionism of any sort to be adequate. This shift would include not only the way we look and walk through the world, but also a shift in the way we approach problems to include more diversity of ideas and ways of knowing, as well as consideration of needs beyond those of humans.

Symmathesy

A n entity that forms over time through interaction and contextual mutual learning. A symmathesy is an alternative to a "system," acknowledging that this word connotes too much isolation and allows the emergence of interrelational junctions between systems. Systems rely on one another to function, the perfect example being the interrelations between different processes in an ecosystem. Like many other terms in the Perennial Turn glossary, accepting the interdependence of not only players in systems but of systems within greater "symmathesies" would allow for greater respect and stewardship of all parts of the Earth.

S imilar to other words in this Perennial Turn Glossary, systems thinking places an emphasis on the larger system in which events are taking place. This entry is slightly more tangible and stresses the importance of considering systems when making decisions whose effects may reach beyond their intended targets. Systems thinking allows for larger questions than the scientific method traditionally does, and includes considerations not only of the ecological world but cultural, ethical, and socio-ecological (and beyond) as well.

A long-term movement and shift in thinking and behavior towards farming practices that are sustained as much as possible by natural resources and human guidance. Sustainable agriculture contributes positively to ecosystem health, rather than destroying it. A right relationship with agriculture is both a goal of and a means to implementing this movement.

Thriveability

The right and ability of all species to prosper in their evolutionary niche, without infringement of those rights. Thriveability can best be described as fundamental human rights without an anthropocentric mindset, an ideology that requires basic and fundamental rights for all living things. In practice, thriveability does not simply mean that all members of the earth have the right to live as they wish, but that the rights of all members should be respected and considered when making a decision on how to live.

A human subscriber to thriveability should recognize their unique place as extremely powerful players on the globe and the power they have to recognize the fundamental rights of other beings.
